

PRESS RELEASE

LOCJACK™

***WINS CEA's Mark of Excellence
Structured Wiring Product of the Year!***

Medley, Florida – January, 2014 – Quest Technology International, Inc. is proud to announce that its newest addition of their Structured Cabling product line, the **LocJack** Keystone Security Jack, has just been awarded **CEA's Mark of Excellence Award for Structured Wiring Product of the Year at CES 2014**. This award is **LocJack's** third win in its category after receiving its Winning awards for *Best in Network Support Solutions at ISC West 2013* and *CEPro Best at CEDIA 2013*.

LocJack is a patented locking Cat3/Cat5E/Cat6 keystone jack for securing data and voice cables from accidentally or intentionally being removed or inserted by unauthorized personnel. Its locking feature is built into each individual jack providing a secure fastening of standard assembled or snagless cables which can only be released with the proprietary insertion/removal security key. **LocJack** is designed with a slim-style profile for use in all standard and high-density keystone wall plates and patch panels and is ideal for any facilities requiring a higher level of network security in exposed areas such as hospitals, hotels, airports, schools, or retail stores, as well as for securing IP Surveillance networks. Visit LocJack.com for product details.
